

# DualSPHysics: Multi-GPU implementation

José M. Domínguez, Iván Martínez-Estévez, Alejandro J.C. Crespo,  
Moncho Gómez-Gesteira

# DualSPHysics origin

- First release in 2007
- Written in Fortran90
- Many formulations
- Validated with high accuracy
- **Too slow for large simulations**

- First release in 2011
- CPU multicore and GPU implementation
- Written in C++, OpenMP and CUDA
- **Optimised for large simulations**

# DualSPHysics solver

SPH HIGHLY PARALLELISED

GPU  CPU  
x100

This graphic shows the words 'GPU' and 'CPU' on either side of a speedometer-style gauge icon. Below the gauge is the text 'x100'.

# DualSPHysics evolution

we need more particles & acceleration!

Multicore and GPU acceleration

Advanced pre- and post-processing tools

# DualSPHysics and tools

## DSPH software includes:

### Pre-processing tools:

- Converts geometry into particles.
- Provides configuration for simulation.

### DualSPHysics solver:

- Runs simulation using SPH particles.
- Obtains data simulation for time intervals.

### Post-processing tools:

- Calculates magnitudes using particle data.
- Generates images and videos starting from SPH particles.

# Advanced pre-processing for DualSPHysics

## Simple XML file for boundary and fluid particles definition

# Advanced pre-processing for DualSPHysics

Basic parameterised shapes

Complex 3D models from professional 3D modelling software

3D Studio Max

Blender

AutoCAD

Shape model

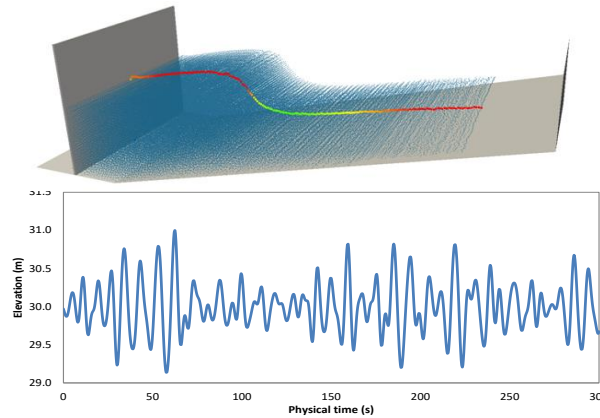

SPH particles

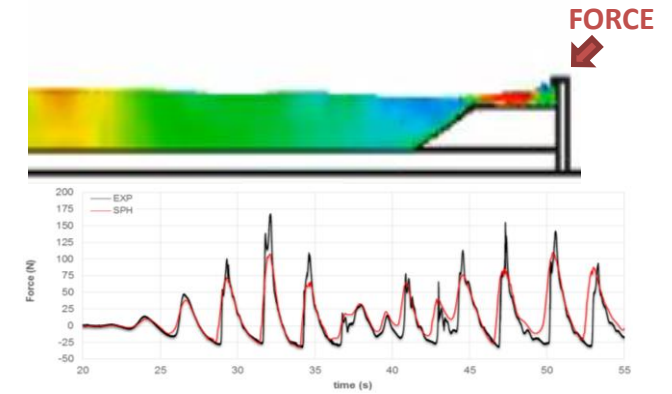

# Main post-processing tools

**PartVTK:** particle data visualisation

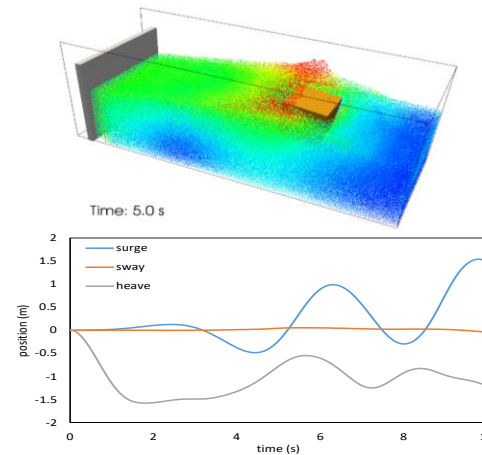

**MeasureTool:** velocity and water elevation calculation

**ComputeForces:** force exerted by the fluid onto a boundary object

**FlowTool:** flow rate in different areas

**FloatingInfo:** velocity, acceleration and motion of floating bodies

**IsoSurface:** efficient visualisation for large number of fluid particles

# DualSPHysics evolution

we need more particles & acceleration!

Multicore and GPU acceleration

Advanced pre- and post-processing tools

we need more particles!

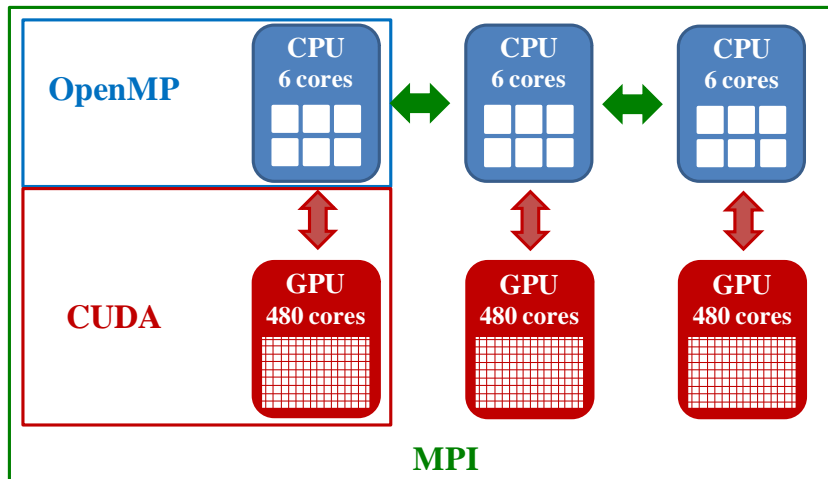

Multi-GPU for Supercomputers (with MPI)

# Multi-GPU for supercomputers using MPI

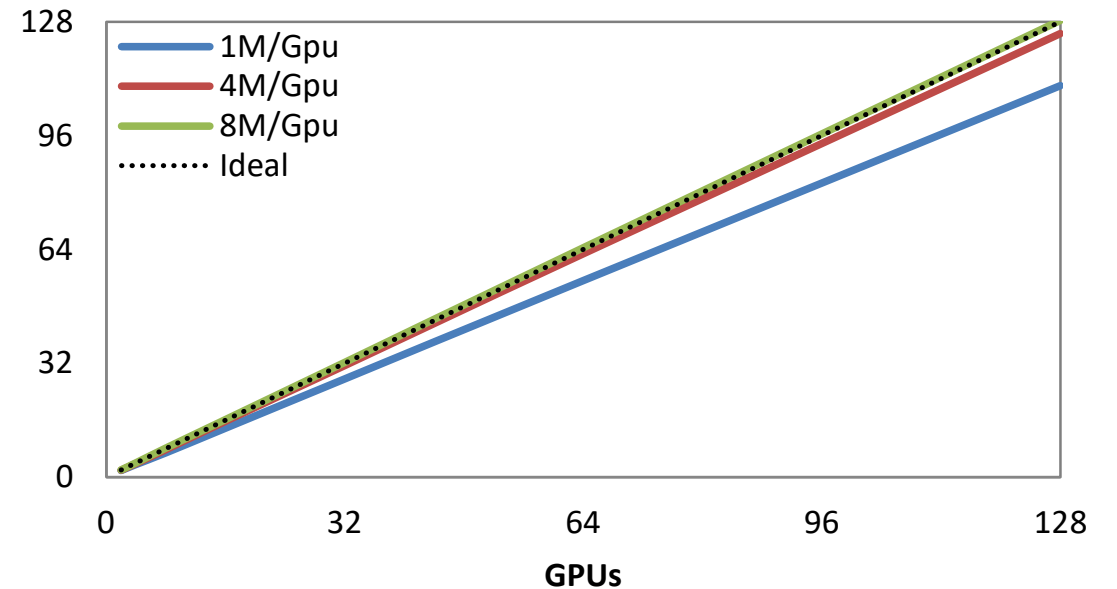

Physical domain division with dynamic load balancing

100% efficiency simulating 8M/GPU on 128 GPUs

Speedup - Weak scaling

# Multi-GPU for supercomputers using MPI

**Largest full SPH free-surface fluid simulation in 2013. More than 1 billion particles!!**

- Large wave interaction with oil rig using  **$10^9$  particles**.
- More than 237,000 simulation steps to simulate **12 physical seconds**.
- **79.1 hours** using **64 GPUs** Tesla M2090.
- **Huge complexity** for pre-processing, simulation and post-processing.
- Very interesting challenge but not very useful.
- Access to a supercomputer is required.
- Too much effort for practical use.
- Many particles do **not allow modelling of complex problems** involving different physical phenomena.

# DualSPHysics evolution

we need more particles & acceleration!

Multicore and GPU acceleration

Advanced pre- and post-processing tools

we need more particles!

Multi-GPU for Supercomputers (with MPI)

more particles is NOT the solution!

New formulations: BCs, DDTs, shifting, inlet/outlet...

we need more physics!

# DualSPHysics formulation I

J.M. Domínguez, G. Fourtakas, C. Altomare, R.B. Canelas, A. Tafuni, O. García-Feal, I. Martínez-Estévez, A. Mokos, R. Vacondio, A.J.C. Crespo, B.D. Rogers, P.K. Stansby, M. Gómez-Gesteira. 2021. **DualSPHysics: from fluid dynamics to multiphysics problems**. Computational Particle Mechanics. [doi:10.1007/s40571-021-00404-2](https://doi.org/10.1007/s40571-021-00404-2)

- Kernel functions:
  - Cubic Spline ([Monaghan and Lattanzio, 1985](#))
  - Quintic Wendland ([Wendland, 1995](#))
- Density diffusion Term:
  - Molteni ([Molteni and Colagrossi, 2009](#))
  - Fourtakas ([Fourtakas et al., 2019](#))
  - *Antuono* ([Antuono et al., 2012](#))
  - *Green* ([Green et al., 2019](#))
- Viscosity:
  - Artificial ([Monaghan, 1992](#))
  - Laminar ([Lo and Shao, 2002](#))
  - Laminar + SPS turbulence model ([Dalrymple and Rogers, 2006](#))
- Weakly compressible approach using Tait's equation of state ([Batchelor, 1974](#))

# DualSPHysics formulation II

J.M. Domínguez, G. Fourtakas, C. Altomare, R.B. Canelas, A. Tafuni, O. García-Feal, I. Martínez-Estévez, A. Mokos, R. Vacondio, A.J.C. Crespo, B.D. Rogers, P.K. Stansby, M. Gómez-Gesteira. 2021. **DualSPHysics: from fluid dynamics to multiphysics problems**. Computational Particle Mechanics. [doi:10.1007/s40571-021-00404-2](https://doi.org/10.1007/s40571-021-00404-2)

New physics: DEM, Project Chrono, MoorDyn+, SWASH

# Coupling with other models

J.M. Domínguez, G. Fourtakas, C. Altomare, R.B. Canelas, A. Tafuni, O. García-Feal, I. Martínez-Estévez, A. Mocos, R. Vacondio, A.J.C. Crespo, B.D. Rogers, P.K. Stansby, M. Gómez-Gesteira. 2021. **DualSPHysics: from fluid dynamics to multiphysics problems**. Computational Particle Mechanics. [doi:10.1007/s40571-021-00404-2](https://doi.org/10.1007/s40571-021-00404-2)

- Coupling with Discrete Element Method (Canelas et al., 2016; Canelas et al., 2017)

# Coupling with other models

J.M. Domínguez, G. Fourtakas, C. Altomare, R.B. Canelas, A. Tafuni, O. García-Feal, I. Martínez-Estévez, A. Mokos, R. Vacondio, A.J.C. Crespo, B.D. Rogers, P.K. Stansby, M. Gómez-Gesteira. 2021. **DualSPHysics: from fluid dynamics to multiphysics problems**. Computational Particle Mechanics. [doi:10.1007/s40571-021-00404-2](https://doi.org/10.1007/s40571-021-00404-2)

- Coupling with Discrete Element Method (Canelas et al., 2016)
- Coupling with Project Chrono (Canelas et al., 2018; Martínez-Estévez et al., 2022)

Project Chrono is a **physics-based** modeling and simulation **library** based on a **platform-independent, open-source** design (<http://projectchrono.org>).

- Wide set of joints (spherical, revolute joint, prismatic, universal joint, with limits, etc.).
- Unilateral constraints.
- Exact Coulomb friction model, for precise stick-slip of bodies.
- Springs and dampers, even with non-linear features.
- Recent support for linear and nonlinear Finite Element Analysis - Euler-Bernoulli beams, bars, shells, cables.

# Coupling with other models

J.M. Domínguez, G. Fourtakas, C. Altomare, R.B. Canelas, A. Tafuni, O. García-Feal, I. Martínez-Estévez, A. Mokos, R. Vacondio, A.J.C. Crespo, B.D. Rogers, P.K. Stansby, M. Gómez-Gesteira. 2021. **DualSPHysics: from fluid dynamics to multiphysics problems**. Computational Particle Mechanics. [doi:10.1007/s40571-021-00404-2](https://doi.org/10.1007/s40571-021-00404-2)

- Coupling with Discrete Element Method (Canelas et al., 2016)
- Coupling with Project Chrono (Canelas et al., 2018; Martínez-Estévez et al., 2022)
- Coupling with MoorDyn+ (Domínguez et al., 2019)

**MoorDyn+** is an open-source dynamic **mooring** line model that uses a lumped-mass formulation for modelling axial elasticity, hydrodynamics, and bottom contact.

Floating moored BOX  
Regular waves; H=0.12 m, T=1.6s, d=0.5m

Time: 0.00 s

# DualSPHysics evolution

DesignSPHysics is a complete software that allows the user to

- 1) create a new case,
- 2) execute the simulation and then
- 3) analyse the results
  - 3.1) by visualising the particles
  - 3.2) by computing physical magnitudes of interest

**More than 120M particles on gamer GPUs (24 GB)**

# DualSPHysics evolution

# New Multi-GPU approach for single-node

multi-GPU machine

**Implementation based on C++ threads and CUDA streams (not MPI)**

**The target is...**

- Multi-GPU **useful for researchers** using DualSPHysics (not computer engineers)
- **Full support** of all current DualSPHysics functionalities
- Aimed at **100-200M** particle simulations **without extra user effort**
- Multi-GPU to run on a workstation or computing node with 4-8 GPUs
- **Accessible hardware** for research groups with limited financial resources

## Advantages:

- More portable and easy to use in Linux & Windows
- Simpler code using shared CPU memory for main program data
- More efficient communication. MPI overhead was removed.
- Not special pre-processing and post-processing tools required

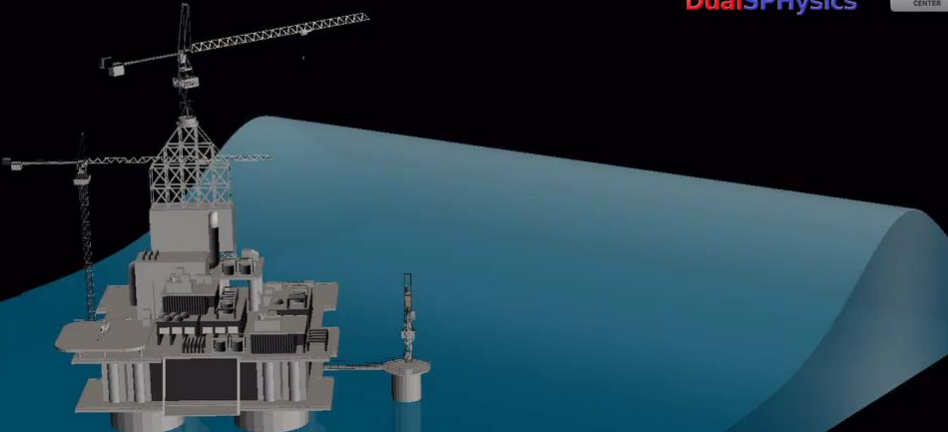

## Drawbacks:

- Limited number of GPUs (2-8 GPUs)
- Does not work in distributed systems
- **Limited size of the simulations?**

# Multi-GPU for supercomputers using MPI

- **Full support** of all current DualSPHysics functionalities
- Aimed at **100-200M** particle simulations **without extra user effort**
- Multi-GPU to run on a workstation or computing node with 4-8 GPUs
- **Accessible hardware** for research groups with limited financial resources

**The challenges are...**

- DualSPHysics includes a lot of functionalities and options (**full support is not easy**)
- **Refactoring of many parts** (floating bodies, gauges, inlet/outlet...) is mandatory to minimise communication and synchronisation points
- The pre-processing tool can generate up to 500M particles (upgrade is necessary)
- GPU acceleration may be required for some post-processing tools (e.g. IsoSurface)
- More post-processing options in the DualSPHysics solver are necessary to minimise the size of the output files (7.7GB per output file of 100M particles)

# New Multi-GPU approach for single-node

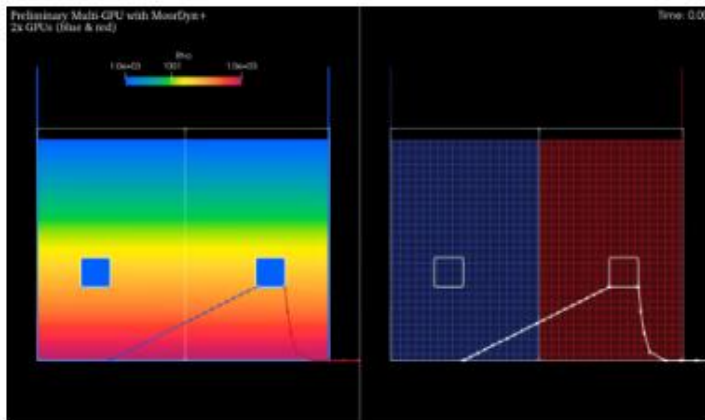

multi-GPU machine

Implementation based on C++ threads and CUDA streams (not MPI)

Work in progress...

- All formulations are finished, but some significant functionalities are missing
- 74% of the example cases included in the release package (more than 100) already support multi-GPU
- Preliminary results are very promising
- **New multi-GPU release expected in 2025!!**

Moored floating bodies on multi-GPU

Floating bodies between 2 GPUs using mDBC
